The Cinematic Website Playbook

One system, sixteen niches. Turn a single sentence — or a real client brief — into an award-winning-style scroll website: AI-generated video, scroll-driven animation, launched and verified.

PRODUCT · FASHION · RESTAURANT · GYM · REAL ESTATE · AUTOMOTIVE · JOURNEY · PORTFOLIO
AGENCY · SAAS · MUSIC · BARBERSHOP · CLEANING · GROCERY · CLINIC · EVENTS

How this playbook works

Every niche in this book runs on the same seven-step pipeline. The niche pages only change the **subject, shots, sections and design direction** — the machine underneath never changes.

1 · INTAKE	Who is the site for, what does it sell? Fictional mode: invent everything. Client mode: collect name, city, menu/prices, photos, logo, languages. Ask ONE consolidated question max.
2 · NICHE MAPPING	Match the business to a niche page. No match? Use the pattern matcher on the last page — every business reduces to one of these structural shapes.
3 · VISUAL PLAN	Write the hero-image spec and shot list BEFORE generating anything. The plan is the contract.
4 · GENERATE	Hero image first — always. Pass it as reference to every clip. Std mode, 1080p, 16:9, no audio, ~8s. Chain journey clips final-frame → start-frame.
5 · BUILD	Scroll-scrubbed hero (canvas frame sequence), Lenis smooth scroll, pinned text reveals, counters synced to scroll. One accent color. Sparse copy.
6 · VERIFY	Launch on localhost. Scroll forward AND backward. Test hovers, forms, counters, seams, mobile. 'Done' means verified, not rendered.
7 · DELIVER	Compress videos (~90% smaller), then one more prompt to go live: GitHub → Cloudflare Pages → custom domain.

NON-NEGOTIABLES

The five laws

- 1 · The hero-image trick is mandatory.** Generate ONE hero image first (or upload the client's real photo) and reference it in every clip. Consistency beats quality: a softer clip where the product looks identical feels more expensive than four beautiful clips of four slightly different products.
- 2 · Chain clips for continuous journeys.** Each clip's final frame becomes the next clip's start image. Five clips that scrub like one unbroken camera move — the scroll IS the journey.
- 3 · Spend credits on the hero only.** 2–3 takes of the hero clip, first acceptable take everywhere else. The hero scrub is 80% of the wow.
- 4 · Compress before delivery.** One sentence — “compress the videos for web” — cuts file size ~90% and makes the scroll buttery on any laptop.
- 5 · Iterate like a director, not a developer.** After the first build, give feeling-based notes: “make the hero 20% slower”, “this section feels flat — add one subtle cursor interaction”, “swap the font, it looks generic.” Never regenerate video for a problem CSS can fix.

Client mode — the real business

For real clients, swap generated subjects for the client's actual photos as image references — Seedance animates THEIR product, food, space or car, not an invented one. Feed in the real menu, prices, schedule and hours. For German local businesses default to German copy; offer DE/AR/EN where the audience calls for it (mind RTL layout for Arabic passages).

WHEN NOTHING FITS

The pattern matcher

Every business reduces to a structural shape. Match the shape, borrow the template, re-skin the subject:

Object with parts / craftsmanship	01 Luxury Product	A team selling creativity	09 Agency
Multiple purchasable items	02 E-Commerce Drop	Software or a promise on a screen	10 SaaS
A place people eat or drink in	03 Restaurant	A release with a date	11 Music
A place people train in	04 Gym	A chair people sit in for service	12 Barbershop / Beauty
A property to sell or rent	05 Real Estate	B2B service with contracts	13 Cleaning / Facility
Anything that moves	06 Automotive	Shelves of products, local	14 Food Retail
A story, route or process	07 Journey	Health and trust	15 Clinic
One person's reputation	08 Portfolio	A date people celebrate	16 Events

THE BUSINESS PAGE

The money niches are 03, 05, 12, 13 and 14 — restaurants, realtors, barbers, cleaning companies and markets in your city have never seen websites like this. Build ONE sample from this playbook, show it to five businesses, charge €1.800–€4.500. Delivery flow: sample demo → real assets from the client → swap references → verify → deploy on Cloudflare Pages with their domain → invoice. Upsell: the print package, social clips cut from the same Seedance footage, and a yearly “content refresh” retainer.
